Locked out? Get back in.

The Password Recovery Toolkit is perfect for law enforcement and corporate security professionals. If you need access to locked files or if your users have simply locked themselves out of their files, the PRTK can get you back in.

Security Risk Assessment Tool

How do hackers bypass your strongest security measures? Easily!!

Many people use the *same password* to gain access to *different* programs and network login areas. This could be one of the weakest links in your organization's security profile! Some password protection schemes are easy to crack while others are virtually impossible. But what if the same password is used for both programs? By gaining access to the weakest one you have gained access to the strongest one without the need to crack both.
